General Info

Genvoya is a single-tablet regimen for HIV. It contains three different types of HIV drugs: two nucleotide/nucleoside reverse transcriptase inhibitors and one integrase inhibitor. It also contains a pharmacokinetic enhancer, a drug that has no activity against HIV, but boosts the blood levels and effectiveness of other drugs. Genvoya was approved by the U.S. Food and Drug Administration in November 2015, for use by people living with HIV who are 12 years of age or older and who are either starting HIV treatment for the first time or those wishing to switch their current regimens (provided that they have been on a stable regimen for at least six months, have an undetectable viral load and no history of HIV treatment failure or resistance to any of the drugs in Genvoya).

Genvoya is a combination of four drugs: Vitekta (elvitegravir), tenofovir alafenamide, Emtriva (emtricitabine) and Tybost (cobicistat). Vitekta, Emtriva and Tybost can be purchased individually for use in combination with other HIV drugs. Tenofovir alafenamide is currently unavailable as a standalone drug.

Dosage

Adult Dose: One tablet once a day. Each tablet contains 150 mg elvitegravir, 150 mg cobicistat, 10 mg tenofovir alafenamide fumarate and 200 mg emtricitabine.

Pediatric Dose: N/A

Dosing Info: This is a complete one-pill, once-daily drug regimen. Take with food.

Side Effects

Common side effects include gastrointestinal symptoms, notably diarrhea and nausea, fatigue, and headache.

Genvoya may lead to new or worsening kidney problems, though this risk is lower compared with those using Stribild. Your healthcare provider may do blood tests to check your kidneys before and during treatment with Genvoya.

Genvoya may lead to bone problems, though this risk is lower compared with those using Stribild. Problems include bone pain or bones getting soft or thin, which may lead to fractures. Your healthcare provider may do tests to check your bones.

If you also have hepatitis B virus (HBV) and take Genvoya, your hepatitis may become worse if you stop taking Genvoya. Do not stop taking Genvoya without first talking to your healthcare provider.
