

Stribild

Generic Name: elvitegravir + cobicistat + tenofovir disoproxil fumarate + emtricitabine

Pronunciation: STRY-build

Abbreviation: Quad

Drug Class: [Complete Regimens](#)

Company: Gilead Sciences

Approval Status: Approved

Generic Version Available: No

Drug Indication

The U.S. Department of Health and Human Services (DHHS) Panel on Antiretroviral Guidelines for Adults and Adolescents lists Stribild as a recommended initial HIV treatment regimens in certain clinical situations. Visit

<https://aidsinfo.nih.gov/guidelines/html/1/adult-and-adolescent-arv-guidelines/0> for the full DHHS guidelines.

General Info

Stribild is a single-tablet regimen for HIV. It contains two different types of HIV drugs: one integrase inhibitor and two nucleotide/nucleoside reverse transcriptase inhibitors. It also contains a pharmacokinetic enhancer, a drug that has no activity against HIV, but it boosts the blood levels and effectiveness of other drugs. Stribild was approved by the U.S. Food and Drug Administration in August 2012 for people starting HIV treatment for the first time.

Stribild is a combination of Vitekta (elvitegravir), Tybost (cobicistat), Viread (tenofovir disoproxil fumarate) and Emtriva (emtricitabine). All four drugs can be purchased individually for use in combination with other HIV drugs.

Dosage

Adult Dose: One tablet once a day. Each tablet contains 150 mg elvitegravir, 150 mg cobicistat, 300 mg tenofovir disoproxil fumarate and 200 mg emtricitabine.

Pediatric Dose: N/A

Dosing Info: This is a complete one-pill, once-daily drug regimen. Take with food.

Side Effects

Common side effects include nausea and diarrhea.

Stribild can cause minor increases in serum creatinine, a potential sign of kidney toxicity. These increases do not appear to affect creatinine clearance (CrCl), an even better indicator of kidney health. However, Stribild should not be used by people with CrCL below 70 mL/min. CrCl should be tested before and during treatment with Stribild.

Stribild may lead to bone problems, including bone pain or bones getting soft or thin, which may lead to fractures. Your healthcare provider may do tests to check your bones.

If you also have hepatitis B virus (HBV) and take Stribild, your hepatitis may become worse if you stop taking Stribild. Do not stop taking Stribild without first talking to your healthcare provider.

Drug Interactions

For a review of drug interactions, including prescription and over-the-counter medications and supplements that should not be taken with Stribild or may require dose adjustments, consult the Stribild package
